SECTION 6 : Open Comments

No	Question and Answer
6.1	What helped you learn in this course? - Teaching was excellent that helped me learn this course in an easy manner - Course was well organized and lectures were great. - The homeworks
6.2	What changes would improve your learning? - There should be more link between the coding assignments and the theory - Some tutorials could have been organized to explain the labs better. The classroom lectures were enough to understand the theory, but the labs required some knowledge of coding with LLVM and other things. Also, I missed a class where some midsem solutions were explained, so uploading the rubric would have been more useful. - To Add Labs and tutorial components, this should have been a technical course, but it was a lot of theories. - The assignments are too difficult and grading does not happen correctly. More partial credits and proper help should be given for assignments - I didn't liked the way of teaching, it seems that TA is teaching the course and that's why I started loosing interest for this course.
6.3	Comments on labs (if any) with respect to the course and your learning. - Lab assignments should be more focussed on front end as back end is majorly heavy + more operating system oriented - NA - The lab assignments were a bit difficult, though the instructor discussed the solutions to them, it was still little bit confusing.
6.4	Comments on teaching (if any) assistant(s) with respect to the course and your learning. - NA - The instructor is specialist in the subject, but sir should improve the way he explains hard concepts and communicate clearly his ideas.
6.5	Comments on tutorials (if any) with respect to the course and your learning. NA
